                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Malibu, CA 90265, USA

This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TICR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the considered to be 3'-truncated if it lacks the sequences are derived from the Ws or Lacer ecotypes and therefore may contain polymorphisms when compared to sequencing of the Genset carried out the library production and sequencing of the full-length clones. Ceres, Inc. carried out the clustering of the full-length clones. Selection of clones, and sequence assembly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Arabidopsis thaliana (thale cress)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CC Many plant secondary metabolites have value as pharmaceuticals, food CC colourings, flavours and fragrances. Some plant secondary metabolites are CI linked to plant or plant cell defence mechanisms and may confer to the CC plant antimicrobial activity, protection against UV light, herbivores, CC pathogens, insects and nematodes. Plant secondary metabolites such as CC terpenoid indole alkaloids (TIA) represent a class of pharmaceutically CC useful compounds which naturally occur in many plant species. New methods CC are described which modulate the expression of one or more genes involved CC in the biosynthesis of plant metabolites or their precursors in plant CC encoding a transcription factor comprises inserving into a plant cell a sequence compounds transcription factor comprising an AP2 DNA-binding domain are useful as central CC pregulators of complex metabolite pathways involving numerous target genes CC for such transcription factors. This means that the yield of commercially CC valuable metabolite compounds can be enhanced and the tolerance of plants CC towards exogenous stress factors can be influenced. The method is useful CC for modulating the level of one or more metabolities. By providing CC by at least 10%, 25% or 100% or reduced 10%, 25%, 50% or 90% relative to CC a cell to which the transcription factor is not provided

                                                                                                                                                                                                                                           The present invention describes an isolated polypeptide that modulates the production of at least one secondary metabolite in an organism, or its derived cell. The polypeptide is selected from a polypeptide encoded by a polynucleotide comprising any of the 871 nucleotide sequences given in the specification. The polypeptides and polynucleotides are useful in modulating the biosynthesis of secondary metabolites (e.g. alkaloids or phemylpropanoids) in an organism or its derived cell. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polypeptides and polynucleotides useful biosynthesis of secondary metabolites (e.g. alkaloids phenylpropanoids) in an organism or its cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inze

The invention relates to identifying a stress condition to which a cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleis in the plant cell with array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell
                                                                                                    Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   28-OCT-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
Altering plant characteristics, useful for producing plants for enzyme pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel method for altering one or more plant CC characteristics. Specifically, it refers to identifying genes that are up CC - or down-regulated in transgenic plants overexpressing the heterodimeric CC EZFA/DPA transcription factor of Arabidopsis and using these sequences to calter plant characteristics accordingly. The present invention describes CC generating transgenic plants for the production of growth regulators, cc enzymes, therapeutics, pharmaceuticals and animal feed products, where CC the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture cror physiology, altered endoreduplication, biochemistry, signal cransduction, storage lipid mobilisation and/or altered photosynthesis, ceach relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers companies can also be useful as positive or negative selectable markers companies can also be useful as positive or negative selectable markers could transformation of cells or tissues. The identified genes play a companie transformation feels or transcription factors. This polymucleotide sequence is thale cress cDNA repressed 1.3 fold or more in plants overexpressing the E2Fa/DPa cranscription factor, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 203;

                                                                                                                                                                                                                                                     fragments. (I) are used to express the corresponding polypeptides (II) or to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered metabolic/biosynthetic pathways (for production of commercial, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agents (e.g. fungicides, insecticides and antibiotics). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at sequence.html?DocID=999909770149

The transcription factors and the genes encoding them are used to alter the structure and developmental characteristics of plants such as soybean, wheat, corn, potato, cotton, rice, oilseed rape, sunflower, alfalfa, sugarcane, turf, banana, blackberry, blueberry, strawberry, raspberry, cantaloupe, carrot, cauliflower, coffee, onion, cucumber, eggplant, grapes, honey dew, lettuce, mango, melon, papaya, peas, peppers, pineapple, spinach, squash, sweet corn, tobacco, tomato, watermelon, rosaceous fruits and/or vegetable brassicas. These sequences tolerance, such as freezing, chilling, heat, drought, water saturation, salt, photoconditions, radiation and ozone. The transcription factors are sequences and in gene therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a number of cDNA sequence and their encoded proteins which are especially transcription factor cDNAs and their proteins. The isolated or recombinant polynucleotide is useful for producing a modified plant with a modified trait, e.g. enhanced tolerance to environmental conditions, improved tolerance to microbial, fungal or viral diseases, improved tolerance to pest infestation, decreased herbicide sensitivity, improved tolerance of heavy metals, or enhanced ability to take up heavy metals, improved growth under poor photoconditions, improved nutrient uptake, or reduced hormone sensitivity. The transgenic plants are useful for growing a progeny plant comprising the desired trait. The polynucleotides and polypeptides are also useful in bioinformatic search methods. This sequence represents one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New stress-related transcription factor polynucleotides and polypeptides, useful for producing transgenic plants with e.g. improved tolerance to diseases or pests, decreased herbicide sensitivity, or improved nutrient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          09-AUG-2001; 2001US-0310847P.

Sherman BK, F
       The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity, disease resistance; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome trichomes; reduced ectopic trichome development; altered trichome development; increase in trichome number; altered stem morphology; increased root growth; increased root hairs; altered seed development; increased root growth; increased noot hairs; altered seed development; altered cell proliferation or cell differentiation; rapid development; increased in seed morphology; seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; flowering; flower structure; stem bifurcation; branching pattern; apical dominance; trichome; stem morphology; root growth; root hair; seed development; cell proliferation; cell differentiation; premature senescence; necrosis; plant size; leaf morphology; seed morphology; seed biochemistry; root anthocyanin; plant anthocyanin; light response; shade avoidance; bioinformatic;
                                                                                                                                                                                                                                                              New transgenic plant comprising a recombinant of more than 500 nucleotide sequences, useful
                                                                                                                                                                                                                                                                                                        WPI; 2004-132245/13.

New transgenic plant, useful in developing improved characteristics or traits. phenotypes with altered ö

Claim 1; SEQ ID NO 27; 213pp; English

The invention relates to a transgenic plant comprises a recombinant CC polynucleotide having a polynucleotide sequence or its complementary CC sequence comprising a sequence encoding a polypeptide, that initiates CC transcription (i.e. a transcription factor) from Arabidopsis, Soybean, CC Rice, Rape or Corn, comprising any of the sequences appearing as ADO01588 CC -ADO03527 or ADO03520-ADO03559. Also included are using a transgenic CC plant to grow a progeny plant, an expression cassette (comprising a cc constitutive, inducible or tissue-specific promoter and a recombinant CC polynucleotide described above), a host cell comprising the expression CC cassette, producing a modified plant having a modified trait, identifying a factor that is modulated by or interacts with a polypeptide encoded by the polynucleotide sequence that is subject to a regulatory effect of any of CC transgenic plant is useful for producing a plant that has an altered CC transgenic plant is useful for producing a plant that has an altered consistive constitution, forezing tolerance to heat, tolerance to daiootic stress (increased tolerance to heat, tolerance to daiootic stress (increased tolerance to heat, tolerance to obsophate limitation, tolerance to potassium CC limitation, decreased sensitivity to nitrogen limitation, altered susceptibility to Fusarium, altered susceptibility to Sclerotinia, altered susceptibility to Sclerotinia, altered susceptibility to Guiferentiation altered susceptibility to Fusarium, altered susceptibility to Sclerotinia, altered susceptibility to Fusarium, altered susceptibility to Fusarium and Fusarium and Fusarium and Fus altered phyllotaxy, altered branching identifying as ADO01588 tolerance extended

Plant secondary metabolites such as C terpenoid indole alkaloids (TIA) represent a class of pharmaceutically cuseful compounds which naturally occur in many plant species. New methods are described which modulate the expression of one or more genes involved in the biosynthesis of plant metabolites or their precursors in plant cells. The method comprises inserting into a plant cell a sequence encoding a transcription factor comprising an AP2 DNA-binding domain and by modifying the expression of that transcription factor. Transcription factors comprising an AP2 DNA-binding domain are useful as central cregulators of complex metabolite pathways involving numerous target genes for such transcription factors. This means that the yield of commercially valuable metabolite compounds can be enhanced and the tolerance of plants to the acogenous stress factors can be influenced. The method is useful correction factor to the cell the level of the metabolite is enhanced by at least 10%, 25% or 100% or reduced 10%, 25% or 90% relative to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent discloses fifteen new salicylic acid (SA) inducible genes in Nicotiana tabacum, which were identified by differential display PCR. Nine of these genes were subcloned and sequenced. Based on different kinetics of induction response, these genes were classified into four categories, class I, II, III and IV response genes. The SA-inducible genes are useful for making transgenic plants with enhanced pathogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ50843 standard; DNA;
                                                                                                                                                                                                                                                                                                                                                                                                           resistance. The plants incorporating these genes show reduced susceptibility to fungal pathogens. The present sequence is a specifically claimed SA-inducible gene C18-1 from N. tabacum, belongs to class I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel salicylic acid inducible genes from tobacco plants, useful making transgenic plants with enhanced pathogenic resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tobacco plant; salicylic acid inducible gene; SA-inducible gene; transgenic plant; pathogen

                                                                                                                                                                                                                                                                           can be used to generate transgenic plants that are resistant to bacterial speck disease and furthermore exhibit increased resistance against biotic and abiotic stresses. This polynucleotide sequence is a recombinant tomato polynucleotide used to generate genetically engineered, disease resistant plants of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a method of generating novel genetically engineered plants. Specifically, it refers to compositions useful for transforming plants with a recombinant polynucleotide or plant gene that shows a specific pattern of expression associated with the Avr-Pto mediated defence response. Avr-Pto is described as the avirulent Pto gene found in Pseudomonas syringae pathovar tomato strain [strain T1(A)], which mediates bacterial speck disease in tomato plants. The present which mediates bacterial speck disease in tomato plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New genetically engineered plant comprising a recombinant polynucleotide showing expression associated with Avr-Pto mediated defense response, useful in increasing resistance of plant against bacterial speck disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADJ10797
                                                                                                                                                                                                                                                                                                                                                                                                                        invention describes identifying genes that are up- or down- regulated the defence response and that are involved in the interaction of Avr-P with Pto and/ or Prf. As such, these novel recombinant polynucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (MYSO/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                      The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered amino acid metabolism, altered ester metabolism, altered metabolism, altered phenolic metabolism, altered carbohydrate metabolism, altered sterol, oxygenated terpene, or isoprenoid metabolism, altered sterol, oxygenated terpene, or oxygenated terpene, or oxygenated terpene, oxygenated terpen
                                                                                                       metabolism, ketone or quinone metabolism. The DNA sequences of the invention may be used to provide disease resistance in a plant and shuffling or sexual PCR procedures. The present nucleic acid represent and the present nucleic acid represent nucleic acid represents nucleic nucleic acid represents nucleic acid represents nucleic acid represents nucleic nucl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 7129; 2576pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel genes that confer altered metabolic characteristics in Nicotiana benthamiana plants, useful for altering the levels of metabolites e.g. acids, fatty acids, amino acids, carbohydrates, hydrocarbons and sterols
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       altered metabolic characteristic; plant; acid metabo alcohol metabolism; fatty acid metabolism; branched fatty acid metabolism; alkaloid metabolism;

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB
